The book begins with a preface, in the form of a message to his son César .1. Field of the Invention The present invention relates to an illuminating apparatus having a light source part and an illuminating part arranged in front of the light source part. 2. Description of the Related Art In recent years, along with the advent of the age of multimedia, demands for display devices capable of displaying various pieces of information have been increasing. As the information to be displayed, not only characters and images but also various pieces of information such as moving images, video, and audio are included. Therefore, currently, a projector is spreading which presents moving images on a large screen or the like by means of a projection method. In the field of the projector, along with the advent of high brightness of a light source lamp, technologies to reduce deterioration of an image quality due to, for example, an age of an optical system, the light source lamp, and a light-receiving element have been required. Incidentally, in recent years, demands for higher definition of images are increasing, and thus, pixels of a light-receiving element tend to increase in number and the amount of light received 2d92ce491b
