
Desktop Screen Record Full Version Free [32/64bit]

Desktop Screen Record is a free screen capture utility for Windows that lets you capture the entire screen, window frame, or a custom area. You don't have to grab your phone or a camera to record something that's happening on your desktop. If you need simple screenshots, this can be accomplished with a button on your keyboard, and even video recordings can be performed with specialized applications like Desktop Screen Record. Record the whole screen or a custom area The application holds all of its features in a classic window frame, with most of the space used for a general description that is more than enough to get you up and running in a jiffy. All controls you need are found in the upper toolbar, with various other customization and quality options to be found. The main purpose is to record screen activity in a video. This can be done either for the whole screen, the window frame region, or a fixed area which you configure by writing down numerical values for position. To better emphasize details, there are options to change the cursor, or make it more visible by having it highlighted with a custom color. Configure emphasis and quality options Once the recording starts, the main window doesn't go away unless you way so. Luckily, it can be minimized to system tray, and there's even built in hotkey support for more comfort and less effort. When the process is halted, a browse dialog shows up so you can specify the save location. Unfortunately, you can't set a default one for automatic saving. On the other hand, Desktop Screen Record lets you configure a whole lot of other details. For more quality, you can manage encoder to use, and tweak corresponding values, decide whether or not to include sound, or include notifications whenever the keyboard is used in the recording session. To end with Taking everything into consideration, we can say that Desktop Screen Record comes in handy for creating tutorials when working on your desktop with difficult tasks. Multiple emphasis methods can be used for the cursor and keyboard interaction, with hotkey support to make things easier, and thorough descriptions for quick accommodation. Description: Desktop Screen Record is a free screen capture utility for Windows that lets you capture the entire screen, window frame, or a custom area. You don't have to grab your phone or a camera to record something that's happening on your desktop. If you need simple screenshots, this can be accomplished with a button on your keyboard, and

What's New in the?

Desktop Screen Record is a professional screen recording tool for Windows that lets you easily capture whatever you're viewing on your computer desktop. The screen recording tool records the desktop into a video file of any format compatible with Mac OS X, Windows, and Linux. You can then encode the video file in any format that is compatible with your preferred software. The screen recording tool lets you import various image files, such as JPG, GIF, BMP, etc., into the video file. You can manually select different areas of the desktop to record for a video file or take a screen capture of the entire desktop with the options to move and resize the area. If you have a webcam, the screen capture feature lets you use the webcam to record your desktop. Record desktop to a video file in various formats. The video file format is compatible with Mac OS X, Windows, and Linux. Capture the contents of the selected area or the entire desktop for a video file. The video file is recorded as a sequence of images. Convert video files to various formats for viewing. The supported formats include AVI, ASF, MP4, MKV, and MOV.
