The first choice for disk-based caching solutions is PrimoCache, which gives users the ability to implement a caching solution for any disc volume. This program can be used as an alternative to standard disc caching solutions, such as Cache It, Zamzar, or FlashCacher. PrimoCache has been created to let users who want to boost their Windows system performance or eliminate the hiccups caused by disk performance, and it is also intended to be an effective solution for those who would like to take advantage of the available RAM memory. PrimoCache Features: PrimoCache is a comprehensive caching system for Windows based on a proprietary technology called Interface Agent. Interface Agent is a system that sniffs out requests and is able to cache the data onto the Windows memory, resulting in a faster response time. The Interface Agent software is contained within the software package. The program is easy to setup and use. Using the Interface Agent technology, PrimoCache can optimize up to 10 volumes at a time. PrimoCache allows for up to 16 GB of disc-based caching space, to be used by Windows. With a quality caching technology such as this, PrimoCache can considerably improve the performance of systems such as XP or Vista. PrimoCache is completely invisible to the Windows operating system and its operations are inconspicuous when in use.

PrimoCache provides the ability to implement automated actions, scheduled updates and also has a useful scheduler. PrimoCache is user-friendly and intuitive. PrimoCache is suitable for Windows systems with a 32-bit OS. A history of cached operations is created, which can be accessed from the GUI. PrimoCache Caching Technology: Interface Agent is a technology that was invented by a French developer called Armor, and is intended to be used as part of a disk caching application. The Interface Agent works by analyzing requests and retrieving the data that is required, provided that this data is cached. If the data is not cached and it is necessary to fetch the information, the Interface Agent does so by accessing the data from the disk. This gives users the ability to improve the speed of computer systems or eliminate the slowdowns that are caused by disk performance. Additional Information: PrimoCache is a disc-caching software which was developed by Armor Technologies Ltd. The program was updated to version 3.0.5

PrimoCache is a Windows application that allows you to cache the data in your computer's memory, in order to improve system performance and response to user requests. It works by using a proprietary driver. It uses both physical and virtual volumes. It is available as a freeware application. The application was developed by PrimoCache, whose aim is to simplify the configuration of the caching procedure. Currently, the database is incompatible with other applications, but the team is working on this problem. The current version 1.3.3.3 is compatible only with Windows XP and Windows Server 2003. You can download the application by clicking on the link below: PrimoCache 1.3.4 is a good option if your computer is an old one and you can't find the time or money to upgrade to Windows 7, Windows Server 2008 or Windows Vista. If you use your computer for games, you can't always afford installing two operating systems on your PC and you don't have a lot of storage space. For this reason, your best solution is to use a program like PrimoCache, which is a free and easy to use application that

promises to help you improve your computer performance. Windows server is a good solution, but in your case, your machine is hardly better than the one you already have, because you have old hardware and also Windows 2003 or Windows Server 2008 has a lot of improvements that you cannot afford. Users that previously used an operating system that has been discontinued can benefit from PrimoCache because the program is easy to use and you don't have to spend any time in getting the program running, as there are no configuration problems. The team of developers is always working to improve the program, by working on the software's stability, reliability and compatibility with other applications, so that PrimoCache continues to work perfectly for the foreseeable future. Here are some key features of the program: Caching individual volumes It is very important to choose a particular volume to be used for the caching process, so that you do not have to use a large amount of space that you don't have, and won't have to spend a lot of time in keeping the drives unformatted. Data caching PrimoCache uses a proprietary driver that enables you to cache the data more quickly. It also uses memory without having to worry about wasting it on volumes that don't have 6a5afdab4c
